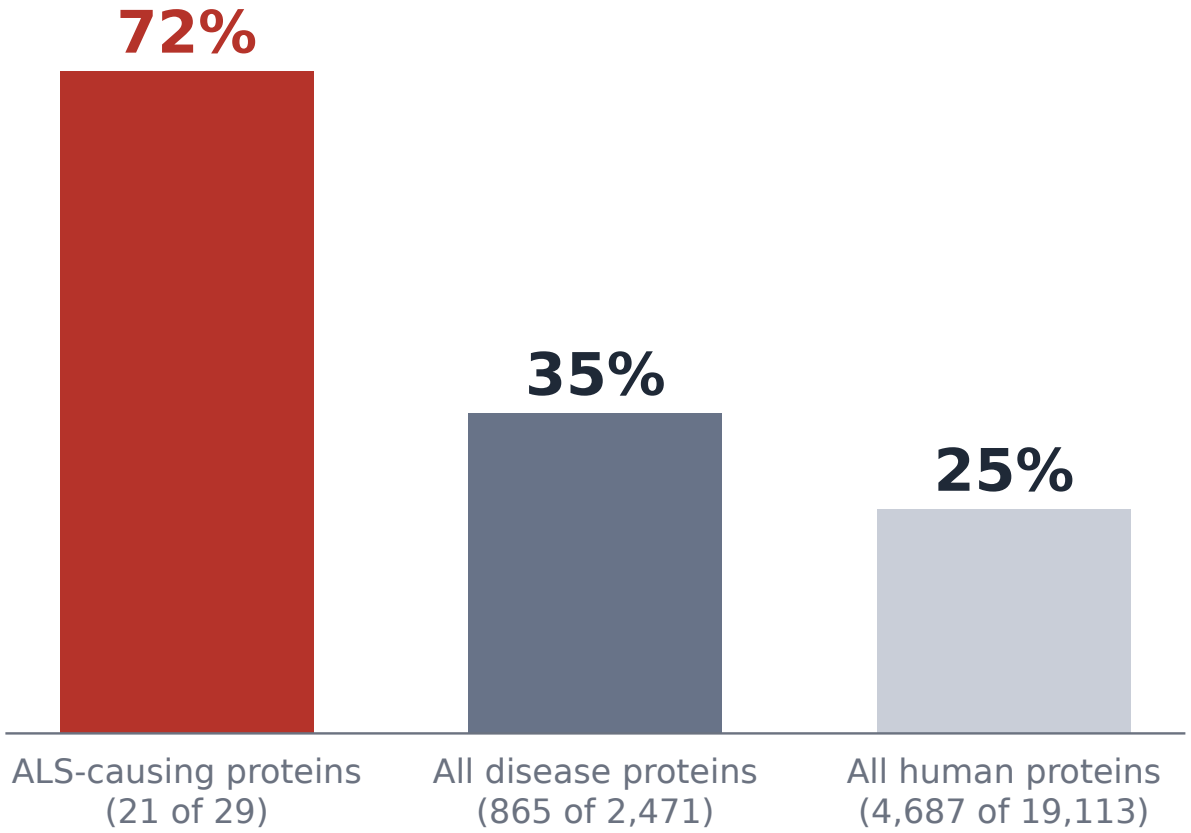
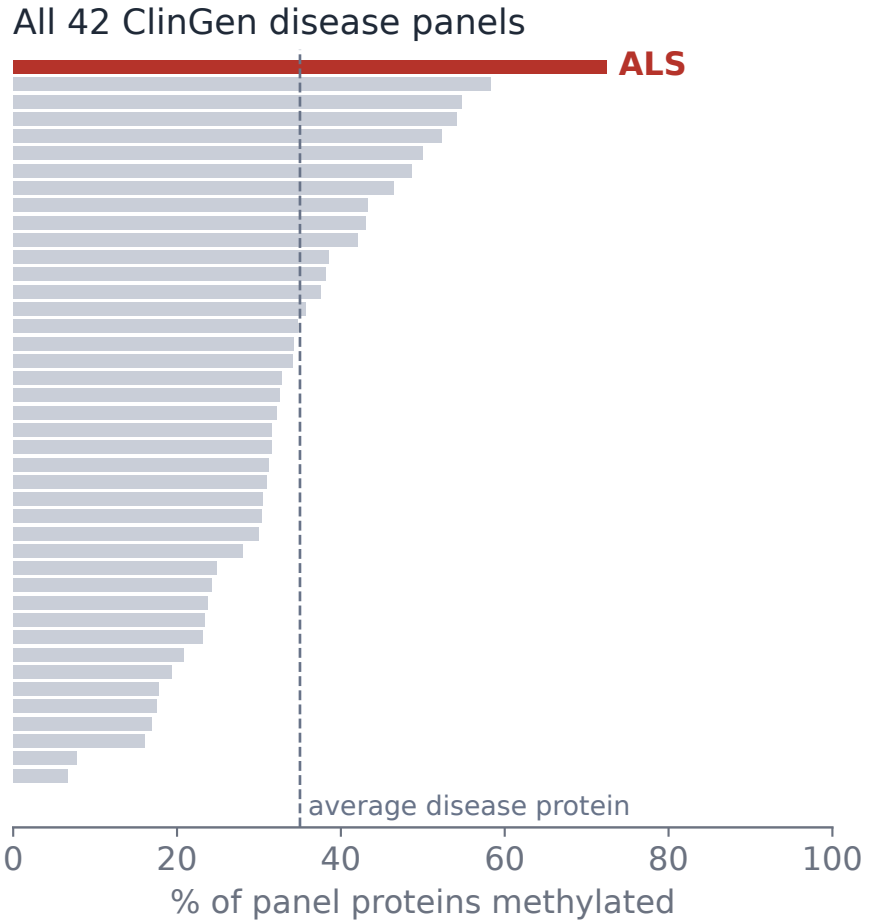
72% of ALS-causing proteins are arginine-methylated

Most of any disease group: ALS ranks 1st of 42 ClinGen curation panels.





ClinGen gene–disease validity (Definitive/Strong/Moderate; panels ≥10 proteins). Methylated = any arginine-methylation site in the PTM_pipeline union. Adjusted for RNA binding, length and abundance, ALS odds ratio 3.0 (95% CI 1.3–7.4). Methylated ALS proteins: ALS2, ANXA11, AR, ATXN2, CHMP2B, DCTN1, FUS, HNRNPA2B1, KIF5A, LRP12, MATR3, NEK1, PFN1, SOD1, SPTLC2, SQSTM1, TARDBP, TUBA4A, UBQLN2, VAPB, VCP.
