ALS proteins carry methylarginine in RGG / low-complexity regions

Arginine-methylation sites on FET proteins, TDP-43, hnRNPA1/A2B1 and MATR3.

Sites: PTM_pipeline methylarginine union, canonical UniProt positions. Domains and Gly-rich / low-complexity regions: UniProt annotations. TDP-43 R293 (C-terminal Gly-rich LCD) is reported as monomethylated in 7 proteomic studies; R275 in 3.
